

# CS 480

## *Introduction to Artificial Intelligence*

October 4th, 2022

# Announcements / Reminders

- **Midterm Exam: October 13th!**
  - **Online section:** please make arrangements. Contact Mr. Charles Scott (scott@iit.edu) if in doubt
- **Written Assignment #02:**
  - will be posted this week
- **Quiz #02:**
  - due: October 9th, 11:00 PM CST
- **Programming Assignment #01:**
  - due: October 15th, 11:00 PM CST
- **Please follow the Week 06 To Do List instructions**
- **Spring Semester midterm course evaluation is UP.**
  - Please fill it out if you can. It means a lot to me.
- **Grading TA assignment:**

[https://docs.google.com/spreadsheets/d/1ExS0bKnGt\\_fdf4LHa3YS1qRA7-lq4xqXVjfSAPMaGVk/edit?usp=sharing](https://docs.google.com/spreadsheets/d/1ExS0bKnGt_fdf4LHa3YS1qRA7-lq4xqXVjfSAPMaGVk/edit?usp=sharing)

# Plan for Today

- **Propositional logic**
- **Entailment**
- **Proof by Resolution (if time permits)**

# Propositional Logic: Laws/Theorems

Equivalence	Law / Theorems
$p \vee q \Leftrightarrow q \vee p$ $p \wedge q \Leftrightarrow q \wedge p$	Commutative laws
$(p \vee q) \vee r \Leftrightarrow p \vee (q \vee r)$ $(p \wedge q) \wedge r \Leftrightarrow p \wedge (q \wedge r)$	Associative laws
$p \wedge (q \vee r) \Leftrightarrow (p \wedge q) \vee (p \wedge r)$ $p \vee (q \wedge r) \Leftrightarrow (p \vee q) \wedge (p \vee r)$	Distributive laws
$\neg(p \wedge q) \Leftrightarrow \neg p \vee \neg q$ $\neg(p \vee q) \Leftrightarrow \neg p \wedge \neg q$	De Morgan's laws
$p \wedge (p \vee q) \Leftrightarrow p$ $p \vee (p \wedge q) \Leftrightarrow p$	Absorption laws
$\neg(\neg p) \Leftrightarrow p$	Double Negation law (involution)
$p \wedge p \Leftrightarrow p$ $p \vee p \Leftrightarrow p$	Idempotent laws
$p \vee \neg p \Leftrightarrow T$	Law of Excluded Middle (Negation law)
$p \wedge \neg p \Leftrightarrow \perp$	Contradiction (Negation law)
$p \wedge T \Leftrightarrow p$ $p \vee \perp \Leftrightarrow p$	Identity laws
$p \wedge \perp \Leftrightarrow \perp$ $p \vee T \Leftrightarrow T$	Domination laws
$\neg p \vee q \Leftrightarrow p \Rightarrow q$	Implication law
$p \Rightarrow q \Leftrightarrow \neg q \Rightarrow \neg p$	Contraposition law
$(p \wedge q) \vee (\neg q \wedge \neg p) \Leftrightarrow (p \Leftrightarrow q)$ $(p \Rightarrow q) \wedge (q \Rightarrow p) \Leftrightarrow (p \Leftrightarrow q)$	Equivalence law

# Deduction

Laws/theorems in propositional logic can be used to prove additional theorems through a process known as **deduction**:

Note that we only manipulated symbols at the syntactic level!

Prove that  $((\neg m \vee n) \wedge \neg n) \Rightarrow \neg m$  is a tautology:

$$((\neg m \wedge \neg n) \vee (n \wedge \neg n)) \Rightarrow \neg m$$

$$((\neg m \wedge \neg n) \vee \perp) \Rightarrow \neg m$$

$$(\neg m \wedge \neg n) \Rightarrow \neg m$$

$$\neg(\neg m \wedge \neg n) \vee \neg m$$

$$(\neg\neg m \vee \neg\neg n) \vee \neg m$$

$$(m \vee n) \vee \neg m$$

$$m \vee (n \vee \neg m)$$

$$m \vee (\neg m \vee n)$$

$$(m \vee \neg m) \vee n$$

$$T \vee n$$

$$n \vee T$$

$$T$$

by Distributive law  $p \wedge (q \vee r) \Leftrightarrow (p \wedge q) \vee (p \wedge r)$

by Negation law (contradiction)  $p \wedge \neg p \Leftrightarrow \perp$

by Identity law  $p \vee \perp \Leftrightarrow p$

by Implication law  $\neg p \vee q \Leftrightarrow p \Rightarrow q$

by De Morgan's law  $\neg(p \wedge q) \Leftrightarrow \neg q \vee \neg p$

by Double Negation law  $\neg(\neg p) \Leftrightarrow p$

by Associative law  $(p \vee q) \vee r \Leftrightarrow p \vee (q \vee r)$

by Commutative law  $p \vee q \Leftrightarrow q \vee p$

by Associative law  $(p \vee q) \vee r \Leftrightarrow p \vee (q \vee r)$

by Law of Excluded Middle  $p \vee \neg p \Leftrightarrow T$

by Commutative law  $p \vee q \Leftrightarrow q \vee p$

by Domination Law  $p \vee T \Leftrightarrow T$

# Propositional Logic and KB-Agents

**Propositional  
Logic:  
Syntax**

**Propositional  
Logic:  
Semantics**

**Propositional  
Logic:  
Inference and  
Proof Systems**

**KB-Agents:  
Inference  
algorithms**

# Interpretation

The truth value assignment to propositional sentences is called an **interpretation** (an assertion about their truth **in some possible world / model**).

**Definition:** A mapping  $I : \Sigma \rightarrow \{\text{true}, \text{false}\}$ , which assigns a truth value to **every proposition variable**, is called an **interpretation**.

**Sentence:**  $(p \vee q) \wedge (\neg q \vee r)$

**Interpretation i:**  $p^i = \text{true}$ ,  $q^i = \text{false}$ ,  $r^i = \text{true}$

# Complex Sentence: Truth Table

Consider a complex sentence  $R$  built with  $N$  propositional variables  $p_1, p_2, p_3, \dots, p_{N-1}, p_N$  and logical connectives ( $\neg, \vee, \wedge, \Rightarrow, \Leftrightarrow$ ). Each truth assignment is a different possible world.

$N$ Propositional Variables							Complex sentence $R$
$p_1$	$p_2$	$p_3$	...	$p_{N-1}$	$p_N$		
true	true	true	...	true	true	false	$2^N$ Interpretations of $R$
true	true	true	...	true	false	true	
true	true	false	...	false	true	false	
...	...	...	...	...	...	...	
false	false	true	...	true	false	true	
false	false	true	...	false	true	true	
false	false	false	...	false	false	false	

# Sentence Classes

## SATISFIABLE

A sentence is **satisfiable** if it is **true for AT LEAST ONE interpretation.**

In plain English:

“You can find **AT LEAST one assignment** of logical values of true and false to individual propositional variables that will make this sentence **true.**”

Example:

$$p \Rightarrow q$$

p	q	$p \Rightarrow q$
true	true	true
true	false	false
false	true	true
false	false	true

## (LOGICALLY) VALID/TAUTOLOGY

A sentence is (logically) **valid** if it is **true for ALL interpretations.**  
Also called a **tautology.**

In plain English:

“This sentence is **ALWAYS true** regardless of value assignment to individual propositional variables.”

Example:

$$p \vee \neg p$$

p	$\neg p$	$p \vee \neg p$
true	false	true
true	false	true
false	true	true
false	true	true

## UNSATISFIABLE/CONTRADICTION

A sentence is **unsatisfiable** if it is **NOT true for ANY interpretation.**  
Also called a **contradiction.**

In plain English:

“This sentence is **ALWAYS false** regardless of value assignment to individual propositional variables.”

Example:

$$p \wedge \neg p$$

p	$\neg p$	$p \wedge \neg p$
true	false	false
true	false	false
false	true	false
false	true	false

# Propositional Logic and KB-Agents

**Propositional  
Logic:  
Syntax**

**Propositional  
Logic:  
Semantics**

**Propositional  
Logic:  
Inference and  
Proof Systems**

**KB-Agents:  
Inference  
algorithms**

# Inference: The idea

## The idea:

**Given everything (expressed as sentences) that we know, can we infer if some query (another sentence) is true or not (satisfied or not)?**

# **(Automated) Proof System**

**In AI we are interested in taking existing knowledge (sentences in KB) and from that:**

- **deriving new knowledge (new sentences)**
- **answering questions (query sentences)**

**In Propositional Logic this means showing that some sentence  $Q$  follows from a Knowledge Base KB**

**where:**

- **$Q$  - some query sentence**
- **KB - knowledge base (a sentence made of sentences)**

# Propositional Logic: An Argument

An argument  $A$  in propositional logic has the following form:

A:	P1	PREMISES
	P2	
	...	
	PN	
	<hr/>	
	$\therefore C$	CONCLUSION

Premises are taken for granted (assumed to be **true**).

# Inference Rules: Summary

## Rules of Inference:

<b>Modus Ponens</b> $P \Rightarrow Q$ $P$ <hr/> $\therefore Q$	<b>Modus Tollens</b> $P \Rightarrow Q$ $\neg Q$ <hr/> $\therefore \neg P$	<b>Hypothetical Syllogism (Transitivity)</b> $P \Rightarrow Q$ $Q \Rightarrow R$ <hr/> $\therefore P \Rightarrow R$	<b>Conjunction</b> $P$ $Q$ <hr/> $\therefore P \wedge Q$
<b>Addition</b> $P$ <hr/> $\therefore P \vee Q$	<b>Simplification</b> $P \wedge Q$ <hr/> $\therefore P$	<b>Disjunctive Syllogism</b> $P \vee Q$ $\neg P$ <hr/> $\therefore Q$	<b>Resolution</b> $P \vee Q$ $\neg P \vee R$ <hr/> $\therefore Q \vee R$

## Tautological forms:

**Modus Ponens:**  $((P \Rightarrow Q) \wedge P) \Rightarrow Q$  | **Modus Tollens:**  $((P \Rightarrow Q) \wedge \neg Q) \Rightarrow \neg P$

**Hypothetical Syllogism:**  $((P \Rightarrow Q) \wedge (Q \Rightarrow R)) \Rightarrow (P \Rightarrow R)$

**Disjunctive Syllogism:**  $((P \vee Q) \wedge \neg P) \Rightarrow Q$

**Addition:**  $P \Rightarrow P \vee Q$  | **Simplification:**  $(P \wedge Q) \Rightarrow P$

**Conjunction:**  $(P) \wedge (Q) \Rightarrow (P \wedge Q)$  | **Resolution:**  $((P \vee Q) \wedge (\neg P \vee R)) \Rightarrow (Q \vee R)$

# Argument Validity: Truth Table Proof

$$p \Rightarrow q$$

$$q \Rightarrow \neg r$$

$$\neg p \Rightarrow \neg r$$

---

$$\therefore \neg r$$

p	q	r	P1: $p \Rightarrow q$	P2: $q \Rightarrow \neg r$	P3: $\neg p \Rightarrow \neg r$	$P1 \wedge P2 \wedge P3$	$(P1 \wedge P2 \wedge P3) \Rightarrow \neg r$
true	true	true	true	false	true	false	true
true	true	false	true	true	true	true	true
true	false	true	false	true	true	false	true
true	false	false	false	true	true	false	true
false	true	true	true	false	false	false	true
false	true	false	true	true	true	true	true
false	false	true	true	true	false	false	true
false	false	false	true	true	true	true	true

# Argument Validity: Truth Table Proof

$$p \Rightarrow q$$

$$A \Leftrightarrow ((p \Rightarrow q) \wedge (q \Rightarrow \neg r) \wedge (\neg p \Rightarrow \neg r) \Rightarrow \neg r)$$

$$q \Rightarrow \neg r$$

An argument A is **valid** if it is a **tautology**.

$$\neg p \Rightarrow \neg r$$

$$\therefore \neg r$$

p	q	r	P1: $p \Rightarrow q$	P2: $q \Rightarrow \neg r$	P3: $\neg p \Rightarrow \neg r$	$P1 \wedge P2 \wedge P3$	$(P1 \wedge P2 \wedge P3) \Rightarrow \neg r$
true	true	true	true	false	true	false	true
true	true	false	true	true	true	true	true
true	false	true	false	true	true	false	true
true	false	false	false	true	true	false	true
false	true	true	true	false	false	false	true
false	true	false	true	true	true	true	true
false	false	true	true	true	false	false	true
false	false	false	true	true	true	true	true

# Argument Validity: Truth Table Proof

$$p \Rightarrow q$$

$$A \Leftrightarrow ((P1) \wedge (P2) \wedge (P3) \Rightarrow \neg r)$$

$$q \Rightarrow \neg r$$

An argument A is **valid** if it is a **tautology**.

$$\neg p \Rightarrow \neg r$$

Argument A is valid, because it is a tautology

$$\therefore \neg r$$

(always true regardless of **p**, **q**, **r** truth assignments)

p	q	r	P1: $p \Rightarrow q$	P2: $q \Rightarrow \neg r$	P3: $\neg p \Rightarrow \neg r$	P1 $\wedge$ P2 $\wedge$ P3	A
true	true	true	true	false	true	false	true
true	true	false	true	true	true	true	true
true	false	true	false	true	true	false	true
true	false	false	false	true	true	false	true
false	true	true	true	false	false	false	true
false	true	false	true	true	true	true	true
false	false	true	true	true	false	false	true
false	false	false	true	true	true	true	true

# Logical Entailment

A set of sentences (called **premises**) logically **entails** a sentence (called a **conclusion**) if and only if **every truth assignment that satisfies the premises also satisfies the conclusion.**

PREMISES  $\sqsubset$  CONCLUSION

# Logical Entailment

**Definition:** A sentence KB entails a sentence Q (or Q follows from KB) if every model of KB is also a model of Q. We write:

$$KB \models Q$$

**In other words:**

- For every interpretation in which KB is **true**, Q is also **true**
- “Whenever KB is **true**, Q is also **true**”

# Entailment: Deriving Conclusions

You can prove if:

$$KB \models Q$$

is **true** in a number of ways:

- Model checking (enumeration)
- Truth table proof (enumeration)
- Proof by resolution

You can also prove related sentences:

- prove that  $KB \wedge \neg Q$  is **unsatisfiable** (by contradiction)
- prove that  $KB \Rightarrow Q$  is a **tautology**

# Model / “Possible World”

A **model** (a “possible world”) is a single truth assignment / interpretation.

If a sentence  $U$  is **true** in model  $K$ ,  $K$  satisfies  $U$ .

$M(U)$ : set of **ALL** models of  $U$  (that satisfy  $U$ )

**Now:**

$KB \models Q$  if and only if  $M(KB) \subseteq M(Q)$

$KB \models Q$  is **true** if and only if **in EVERY model** in which  $KB$  is **true**,  $Q$  is also **true**.

# Logical Entailment with Truth Table

$$p \Rightarrow q \quad \text{KB}$$

$$p \Rightarrow \neg r$$

$$\neg p \Rightarrow \neg r$$

$$\text{KB} \Leftrightarrow (p \Rightarrow q) \wedge (p \Rightarrow \neg r) \wedge (\neg p \Rightarrow \neg r)$$

$$Q \Leftrightarrow \neg r$$

$$\therefore \neg r \quad Q$$

Model	p	q	r	P1:p $\Rightarrow$ q	P2:q $\Rightarrow$ $\neg$ r	P3: $\neg$ p $\Rightarrow$ $\neg$ r	KB	Q
M1	true	true	true	true	false	true	false	false
M2	true	true	false	true	true	true	true	true
M3	true	false	true	false	true	true	false	false
M4	true	false	false	false	true	true	false	true
M5	false	true	true	true	false	false	false	false
M6	false	true	false	true	true	true	true	true
M7	false	false	true	true	true	false	false	false
M8	false	false	false	true	true	true	true	true

# Entailment: Model Checking

$$p \Rightarrow q \quad \text{KB}$$

$$p \Rightarrow \neg r$$

$$\neg p \Rightarrow \neg r$$

$$\therefore \neg r \quad Q$$

$$\text{KB} \Leftrightarrow (p \Rightarrow q) \wedge (p \Rightarrow \neg r) \wedge (\neg p \Rightarrow \neg r) \mid Q \Leftrightarrow \neg r$$

Models where KB is true:  $M(\text{KB}) = \{M2, M6, M8\}$

Models where Q is true:  $M(Q) = \{M2, M4, M6, M8\}$

Model	p	q	r	P1: $p \Rightarrow q$	P2: $q \Rightarrow \neg r$	P3: $\neg p \Rightarrow \neg r$	KB	Q
M1	true	true	true	true	false	true	false	false
M2	true	true	false	true	true	true	true	true
M3	true	false	true	false	true	true	false	false
M4	true	false	false	false	true	true	false	true
M5	false	true	true	true	false	false	false	false
M6	false	true	false	true	true	true	true	true
M7	false	false	true	true	true	false	false	false
M8	false	false	false	true	true	true	true	true

# Entailment: Model Checking

$$p \Rightarrow q \quad \text{KB}$$

$$p \Rightarrow \neg r$$

$$\neg p \Rightarrow \neg r$$

$$\therefore \neg r \quad Q$$

$$\text{KB} \Leftrightarrow (p \Rightarrow q) \wedge (p \Rightarrow \neg r) \wedge (\neg p \Rightarrow \neg r) \mid Q \Leftrightarrow \neg r$$

Models where KB is true:  $M(\text{KB}) = \{M2, M6, M8\}$

Models where Q is true:  $M(Q) = \{M2, M4, M6, M8\}$

$M(\text{KB}) \subseteq M(Q)$  so Q follows KB

Model	p	q	r	P1: $p \Rightarrow q$	P2: $q \Rightarrow \neg r$	P3: $\neg p \Rightarrow \neg r$	KB	Q
M1	true	true	true	true	false	true	false	false
M2	true	true	false	true	true	true	true	true
M3	true	false	true	false	true	true	false	false
M4	true	false	false	false	true	true	false	true
M5	false	true	true	true	false	false	false	false
M6	false	true	false	true	true	true	true	true
M7	false	false	true	true	true	false	false	false
M8	false	false	false	true	true	true	true	true

# KB $\Rightarrow$ Q is a **Tautology** Proof

$$p \Rightarrow q$$

$$p \Rightarrow \neg r$$

$$\neg p \Rightarrow \neg r$$

$$\therefore \neg r$$

KB  $\Rightarrow$  Q is **true** for ALL models / interpretations

KB  $\Rightarrow$  Q is a **tautology**

p	q	r	P1:p $\Rightarrow$ q	P2:q $\Rightarrow$ $\neg$ r	P3: $\neg$ p $\Rightarrow$ $\neg$ r	KB	KB $\Rightarrow$ Q
true	true	true	true	false	true	false	<b>true</b>
true	true	false	true	true	true	true	<b>true</b>
true	false	true	false	true	true	false	<b>true</b>
true	false	false	false	true	true	false	<b>true</b>
false	true	true	true	false	false	false	<b>true</b>
false	true	false	true	true	true	true	<b>true</b>
false	false	true	true	true	false	false	<b>true</b>
false	false	false	true	true	true	true	<b>true</b>

# Enumeration: Issues

Consider a complex sentence  $R$  built with  $N$  propositional variables  $p_1, p_2, p_3, \dots, p_{N-1}, p_N$  and logical connectives ( $\neg, \vee, \wedge, \Rightarrow, \Leftrightarrow$ ). Each truth assignment is a different possible world.

$N$ Propositional Variables							Complex sentence $R$
$p_1$	$p_2$	$p_3$	...	$p_{N-1}$	$p_N$		
true	true	true	...	true	true	false	$2^N$ Interpretations of $R$
true	true	true	...	true	false	true	
true	true	false	...	false	true	false	
...	...	...	...	...	...	...	
false	false	true	...	true	false	true	
false	false	true	...	false	true	true	
false	false	false	...	false	false	false	

# Logical Entailment

**Definition:** A sentence **KB** entails sentence **Q** (or **Q** follows from **KB**) if every model of **KB** is also a model of **Q**. We write:

$$\text{KB} \sqsubseteq \text{Q}$$

**One more way to look at it:**

If **KB** entails **Q**,

- “the truth of **KB** guarantees truth of **Q**”
- “the falsity of **KB** guarantees falsity of **Q**”

# Entailment: Deriving Conclusions

You can prove that:

$$KB \models Q$$

is **true** in a number of ways:

- Model checking (enumeration)
- Truth table proof (enumeration)
- Proof by resolution

You can also prove related sentences:

- prove that  $KB \wedge \neg Q$  is **unsatisfiable** (by contradiction)
- prove that  $KB \Rightarrow Q$  is a **tautology**

# Entailment Proofs

$$KB \equiv (p \Rightarrow q) \wedge (p \Rightarrow \neg r) \wedge (\neg p \Rightarrow \neg r) \quad | \quad Q \equiv \neg r$$

Prove that  $(KB \Rightarrow Q) \Leftrightarrow T$   
(Show that  $KB \Rightarrow Q$  is a  
**tautology**)

Prove that  $(KB \wedge \neg Q) \Leftrightarrow \perp$   
(Show that  $KB \wedge \neg Q$  is a  
**contradiction**)

Proof by model checking  
Show that all models that are **true**  
for  $Q$  are also **true** for  $KB$

Model	p	q	r	$p \Rightarrow q$	$q \Rightarrow \neg r$	$\neg p \Rightarrow \neg r$	KB	Q	$KB \Rightarrow Q$	$KB \wedge \neg Q$
M1	true	true	true	true	false	true	false	false	true	false
M2	true	true	false	true	true	true	true	true	true	false
M3	true	false	true	false	true	true	false	false	true	false
M4	true	false	false	false	true	true	false	true	true	false
M5	false	true	true	true	false	false	false	false	true	false
M6	false	true	false	true	true	true	true	true	true	false
M7	false	false	true	true	true	false	false	false	true	false
M8	false	false	false	true	true	true	true	true	true	false

# Entailment Proofs

$$KB \equiv (p \Rightarrow q) \wedge (p \Rightarrow \neg r) \wedge (\neg p \Rightarrow \neg r) \quad | \quad Q \equiv \neg r$$

Prove that  $(KB \Rightarrow Q) \Leftrightarrow T$   
(Show that  $KB \Rightarrow Q$  is a  
**tautology**)

Prove that  $(KB \wedge \neg Q) \Leftrightarrow \perp$   
(Show that  $KB \wedge \neg Q$  is a  
**contradiction**)

Proof by model checking  
Show that all models that are **true**  
for  $Q$  are also **true** for  $KB$

$KB \Rightarrow Q$  is **true** for all models,  
so  $KB$  entails  $Q$

Model	p	q	r	$p \Rightarrow q$	$q \Rightarrow \neg r$	$\neg p \Rightarrow \neg r$	KB	Q	$KB \Rightarrow Q$	$KB \wedge \neg Q$
M1	true	true	true	true	false	true	false	false	true	false
M2	true	true	false	true	true	true	true	true	true	false
M3	true	false	true	false	true	true	false	false	true	false
M4	true	false	false	false	true	true	false	true	true	false
M5	false	true	true	true	false	false	false	false	true	false
M6	false	true	false	true	true	true	true	true	true	false
M7	false	false	true	true	true	false	false	false	true	false
M8	false	false	false	true	true	true	true	true	true	false

# Entailment Proofs

$$KB \equiv (p \Rightarrow q) \wedge (p \Rightarrow \neg r) \wedge (\neg p \Rightarrow \neg r) \quad | \quad Q \equiv \neg r$$

Prove that  $(KB \Rightarrow Q) \Leftrightarrow T$   
(Show that  $KB \Rightarrow Q$  is a  
**tautology**)

Prove that  $(KB \wedge \neg Q) \Leftrightarrow \perp$   
(Show that  $KB \wedge \neg Q$  is a  
**contradiction**)

Proof by model checking  
Show that all models that are **true**  
for  $Q$  are also **true** for  $KB$

$KB \Rightarrow Q$  is **true** for all models,  
so  $KB$  entails  $Q$

$KB \wedge \neg Q$  is **false** for all models,  
so  $KB$  entails  $Q$

Model	p	q	r	$p \Rightarrow q$	$q \Rightarrow \neg r$	$\neg p \Rightarrow \neg r$	KB	Q	$KB \Rightarrow Q$	$KB \wedge \neg Q$
M1	true	true	true	true	false	true	false	false	true	false
M2	true	true	false	true	true	true	true	true	true	false
M3	true	false	true	false	true	true	false	false	true	false
M4	true	false	false	false	true	true	false	true	true	false
M5	false	true	true	true	false	false	false	false	true	false
M6	false	true	false	true	true	true	true	true	true	false
M7	false	false	true	true	true	false	false	false	true	false
M8	false	false	false	true	true	true	true	true	true	false

# Entailment Proofs

$$KB \equiv (p \Rightarrow q) \wedge (p \Rightarrow \neg r) \wedge (\neg p \Rightarrow \neg r) \quad | \quad Q \equiv \neg r$$

Prove that  $(KB \Rightarrow Q) \Leftrightarrow T$   
(Show that  $KB \Rightarrow Q$  is a  
**tautology**)

$KB \Rightarrow Q$  is **true** for all models,  
so  $KB$  entails  $Q$

Prove that  $(KB \wedge \neg Q) \Leftrightarrow \perp$   
(Show that  $KB \wedge \neg Q$  is a  
**contradiction**)

$KB \wedge \neg Q$  is **false** for all models,  
so  $KB$  entails  $Q$

Proof by model checking  
Show that all models that are **true**  
for  $Q$  are also **true** for  $KB$

$M(KB) \subseteq M(Q)$  so  $KB$  entails  $Q$

Model	p	q	r	$p \Rightarrow q$	$q \Rightarrow \neg r$	$\neg p \Rightarrow \neg r$	KB	Q	$KB \Rightarrow Q$	$KB \wedge \neg Q$
M1	true	true	true	true	false	true	false	false	true	false
M2	true	true	false	true	true	true	true	true	true	false
M3	true	false	true	false	true	true	false	false	true	false
M4	true	false	false	false	true	true	false	true	true	false
M5	false	true	true	true	false	false	false	false	true	false
M6	false	true	false	true	true	true	true	true	true	false
M7	false	false	true	true	true	false	false	false	true	false
M8	false	false	false	true	true	true	true	true	true	false

# Model Checking as a Search Problem

Model checking can be considered a search problem. Searching a truth table for models in which **KB** entails **Q** (**Q** follows from **KB**). It is a  $O(2^N)$  problem.

<b>N Propositional Variables</b>							<b>KB</b> $\square$ <b>Q</b>
$p_1$	$p_2$	$p_3$	...	$p_{N-1}$	$p_N$		
true	true	true	...	true	true	false	<b><math>2^N</math> Interpretations</b>
true	true	true	...	true	false	true

Not all propositional variables  $p_i$  need their values assigned to know that

# Truth Table Enumeration: Pseudocode

**function** TT-ENTAILS?( $KB, \alpha$ ) **returns** *true* or *false*

**inputs:**  $KB$ , the knowledge base, a sentence in propositional logic  
 $\alpha$ , the query, a sentence in propositional logic

$symbols \leftarrow$  a list of the proposition symbols in  $KB$  and  $\alpha$

**return** TT-CHECK-ALL( $KB, \alpha, symbols, \{ \}$ )

**function** TT-CHECK-ALL( $KB, \alpha, symbols, model$ ) **returns** *true* or *false*

**if** EMPTY?( $symbols$ ) **then**

**if** PL-TRUE?( $KB, model$ ) **then return** PL-TRUE?( $\alpha, model$ )

**else return** *true*      // when KB is false, always return true

**else**

$P \leftarrow$  FIRST( $symbols$ )

$rest \leftarrow$  REST( $symbols$ )

**return** (TT-CHECK-ALL( $KB, \alpha, rest, model \cup \{P = true\}$ )  
            **and**  
            TT-CHECK-ALL( $KB, \alpha, rest, model \cup \{P = false\}$ ))

Returns true if EITHER “top” OR “bottom” recursive call returns true.

# Evaluation

Evaluation is the process of **determining the truth values of compound/complex sentences** given a **truth assignment for the truth values of proposition constants/atomic sentences**. Consider the following truth assignment i:

$p^i = \text{true}, q^i = \text{false}, r^i = \text{true}$  Assignment

Let's evaluate the following complex sentence  $(p \vee q) \wedge (\neg q \vee r)$ :

$(p \vee q) \wedge (\neg q \vee r) \rightarrow (\text{true} \vee \text{false}) \wedge (\neg \text{false} \vee \text{true})$  Substitution

$(\text{true} \vee \text{false}) \wedge (\neg \text{false} \vee \text{true})$  Disjunction

$\text{true} \wedge (\neg \text{false} \vee \text{true})$  Negation

$\text{true} \wedge (\text{true} \vee \text{true})$  Disjunction

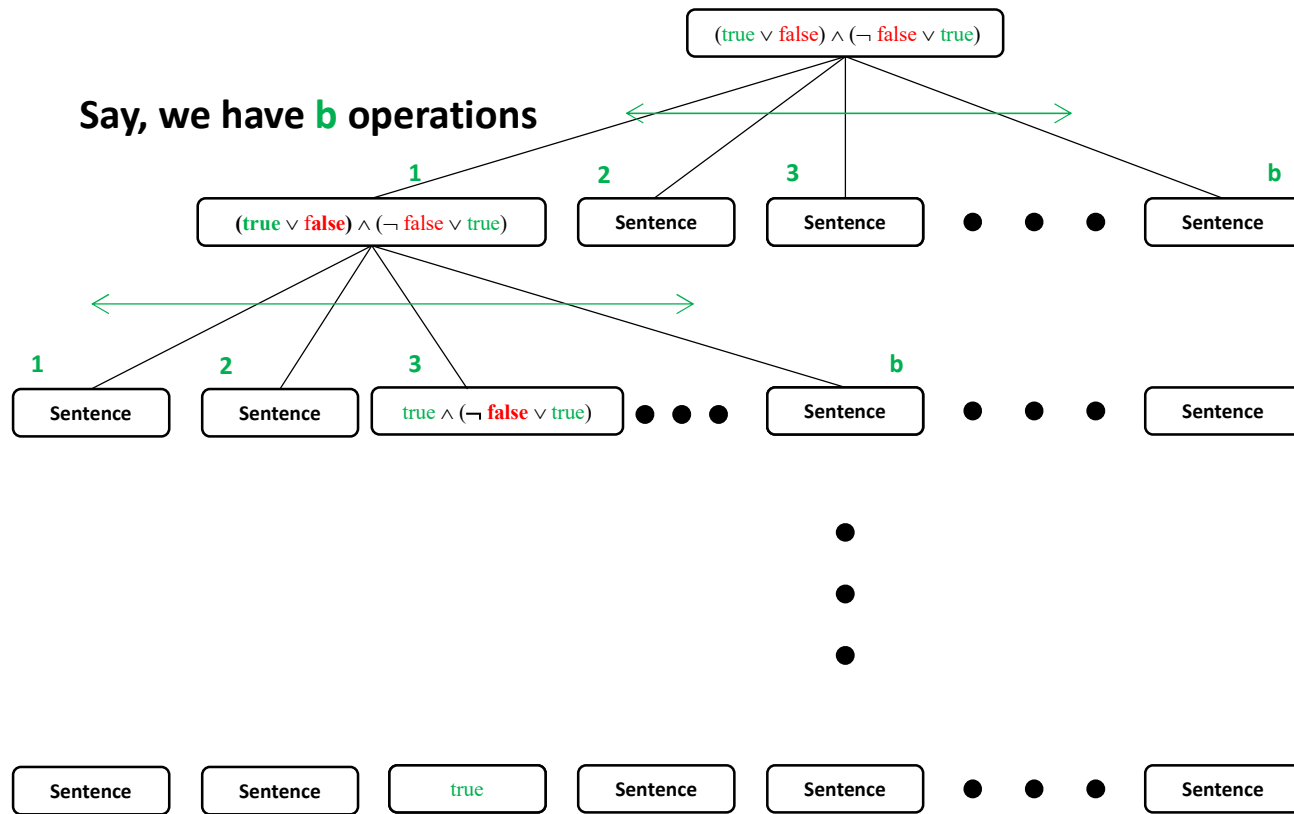

$\text{true} \wedge \text{true}$  Conjunction

$\text{true}$  Interpretation

There is a path of operations that leads from substitution to the final interpretation.

# Proof as Search

Search algorithms can be used to find a sequence of steps that constitute a proof.

Just define the proof problem as a search problem:

- **INITIAL STATE:** initial knowledge base (sentence)
- **ACTIONS:** the set of all language rules
- **RESULT:** resulting sentence after applying a rule
- **GOAL:** a sentence that we are trying to prove

M7	false	false	true	...	...	...	...	true
M8	false	false	false	...	...	...	...	true

# What Does It Mean?

Some queries  $Q$  can be proven to follow  $KB$  or not without interpreting  $KB$  and  $Q$ . For example:

- If  $Q$  is a tautology,  $Q$  will ALWAYS follow from  $KB$  no matter what  $KB$  is
- If  $Q$  is a contradiction,  $Q$  will NEVER follow from  $KB$  no matter what  $KB$  is

This can be decided at the syntax level through deduction.

# Again: Tautology Proved by Deduction

Laws/theorems in propositional logic can be used to prove additional theorems through a process known as **deduction**:

**Prove that  $((\neg m \vee n) \wedge \neg n) \Rightarrow \neg m$  is a tautology:**

$$((\neg m \wedge \neg n) \vee (n \wedge \neg n)) \Rightarrow \neg m$$

$$((\neg m \wedge \neg n) \vee \perp) \Rightarrow \neg m$$

$$(\neg m \wedge \neg n) \Rightarrow \neg m$$

$$\neg(\neg m \wedge \neg n) \vee \neg m$$

$$(\neg\neg m \vee \neg\neg n) \vee \neg m$$

$$(m \vee n) \vee \neg m$$

$$m \vee (n \vee \neg m)$$

$$m \vee (\neg m \vee n)$$

$$(m \vee \neg m) \vee n$$

$$T \vee n$$

$$n \vee T$$

$$T$$

# Propositional Logic Calculus

Syntactic proof systems are called calculi.

To ensure that a calculus DOES NOT generate errors, two properties need to be satisfied:

- A calculus is **SOUND** if every derived proposition follows semantically
- A calculus is **COMPLETE** if all semantic consequences can be derived

# Propositional Logic Calculus

**Soundness:**

**The calculus does NOT produce any FALSE consequences**

**Completeness:**

**A complete calculus ALWAYS find a proof if the sentence to be proved follows from the knowledge base**

**If a calculus is **sound and complete**, then syntactic derivation and semantic entailment are two **equivalent relations**.**

# Entailment: Two Levels

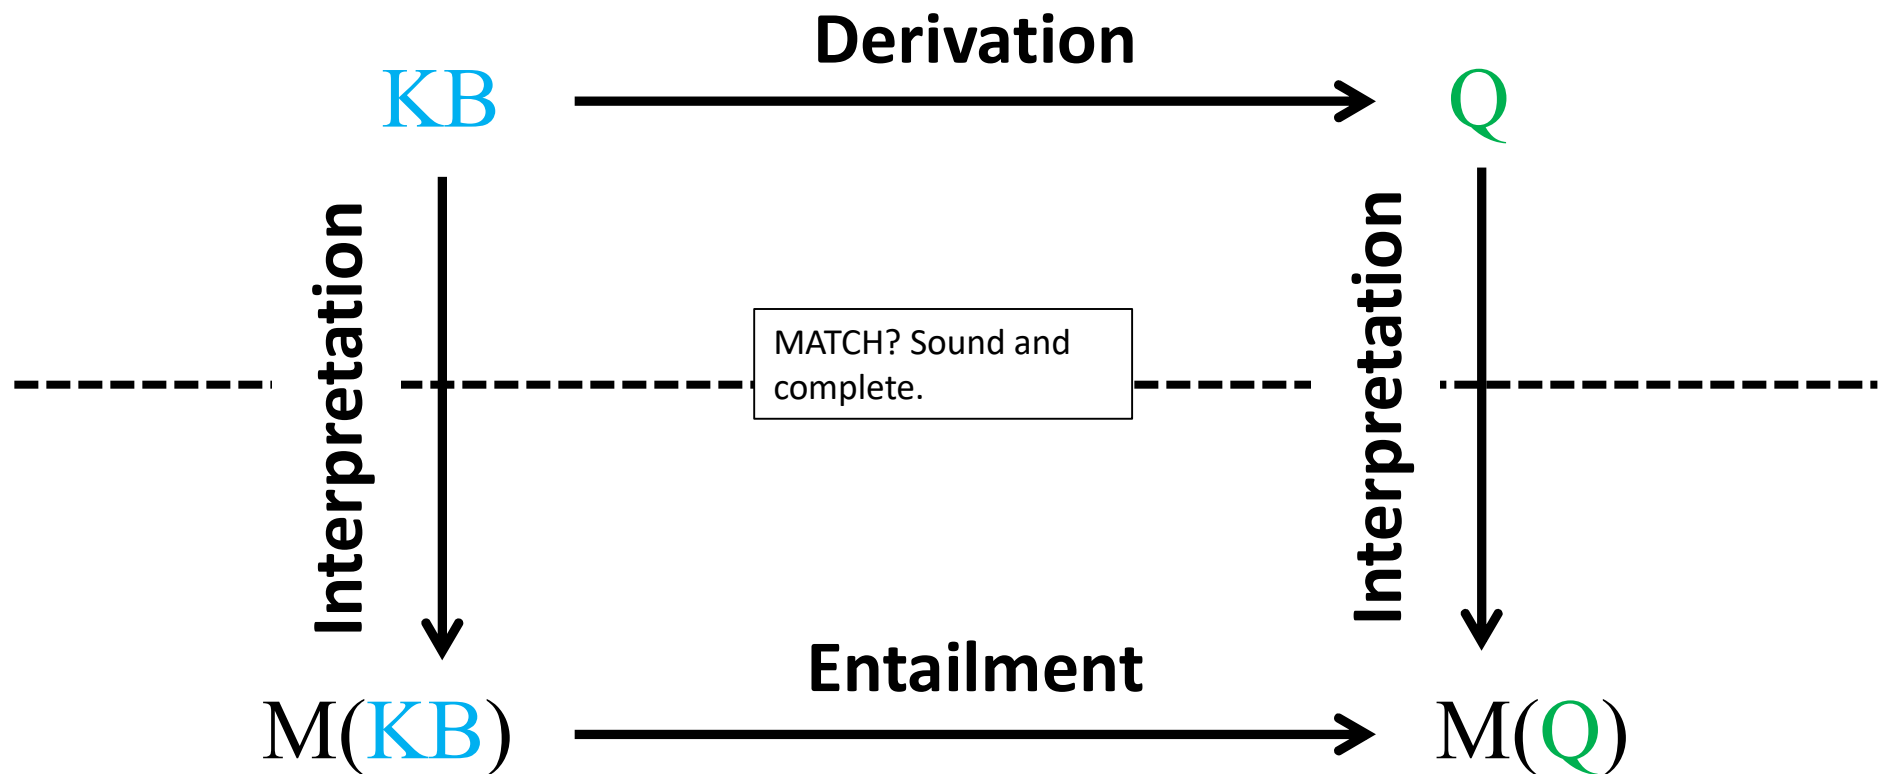

Syntax level

Semantic level

# Proving Entailment: Two Levels

Syntax level

Semantic level

# Inference

**Bottom line:**

**An inference system has to be sound and complete.**

**Resolution rule** is. Couple it with a complete search algorithm and an inference system is in place.

# Inference Rules: Resolution

## Rules of Inference:

<b>Modus Ponens</b> $P \Rightarrow Q$ $P$ <hr/> $\therefore Q$	<b>Modus Tollens</b> $P \Rightarrow Q$ $\neg Q$ <hr/> $\therefore \neg P$	<b>Hypothetical Syllogism (Transitivity)</b> $P \Rightarrow Q$ $Q \Rightarrow R$ <hr/> $\therefore P \Rightarrow R$	<b>Conjunction</b> $P$ $Q$ <hr/> $\therefore P \wedge Q$
<b>Addition</b> $P$ <hr/> $\therefore P \vee Q$	<b>Simplification</b> $P \wedge Q$ <hr/> $\therefore P$	<b>Disjunctive Syllogism</b> $P \vee Q$ $\neg P$ <hr/> $\therefore Q$	<b>Resolution</b> $P \vee Q$ $\neg P \vee R$ <hr/> $\therefore Q \vee R$

## Tautological forms:

**Modus Ponens:**  $((P \Rightarrow Q) \wedge P) \Rightarrow Q$  | **Modus Tollens:**  $((P \Rightarrow Q) \wedge \neg Q) \Rightarrow \neg P$

**Hypothetical Syllogism:**  $((P \Rightarrow Q) \wedge (Q \Rightarrow R)) \Rightarrow (P \Rightarrow R)$

**Disjunctive Syllogism:**  $((P \vee Q) \wedge \neg P) \Rightarrow Q$

**Addition:**  $P \Rightarrow P \vee Q$  | **Simplification:**  $(P \wedge Q) \Rightarrow P$

**Conjunction:**  $(P) \wedge (Q) \Rightarrow (P \wedge Q)$  | **Resolution:**  $((P \vee Q) \wedge (\neg P \vee R)) \Rightarrow (Q \vee R)$

# Proof by Resolution

Recall that we can show that **KB** entails sentence **Q** (or **Q** follows from **KB**):

$$\text{KB} \models \text{Q}$$

by proving that:

$$(\text{KB} \wedge \neg \text{Q}) \Leftrightarrow \perp$$

(show that **KB**  $\wedge$   $\neg$  **Q** is a **contradiction / empty clause**)

# Resolution: Two Forms of Notation

$\perp$	Contradiction	$F, 0, \square$	falsum empty clause
$\therefore$	Therefore		therefore

\* you can encounter it elsewhere in literature

# Conjunctive Normal Form (CNF)

A sentence is in conjunctive normal form (CNF) if and only if consists of **conjunction**:

$$K_1 \wedge K_2 \wedge \dots \wedge K_m$$

of clauses. A clause  $K_i$  consists of a **disjunction**

$$(l_{i1} \vee l_{i2} \vee \dots \vee l_{ini})$$

of literals. Finally, a literal is propositional variable (positive literal) or a negated propositional variable (negative literal).

# Conjunctive Normal Form (CNF)

Example:

$$(a \vee b \vee \neg c) \wedge (a \vee b \vee \neg c) \wedge (\neg b \vee \neg c)$$

**where: a, b, c are literals.**

# Conjunctive Normal Form (CNF)

## Example:

Convert  $m \Leftrightarrow (n \vee o)$  into CNF:

by Equivalence law  $(p \Rightarrow q) \wedge (q \Rightarrow p) \Leftrightarrow (p \Leftrightarrow q)$

$$(m \Rightarrow (n \vee o)) \wedge ((n \vee o) \Rightarrow m)$$

by Implication law  $\neg p \vee q \Leftrightarrow p \Rightarrow q$

$$(\neg m \vee (n \vee o)) \wedge (\neg (n \vee o) \vee m)$$

we can remove parentheses

$$(\neg m \vee n \vee o) \wedge (\neg (n \vee o) \vee m)$$

by De Morgan's law  $\neg (p \wedge q) \Leftrightarrow \neg p \vee \neg q$

$$(\neg m \vee n \vee o) \wedge ((\neg n \wedge \neg o) \vee m)$$

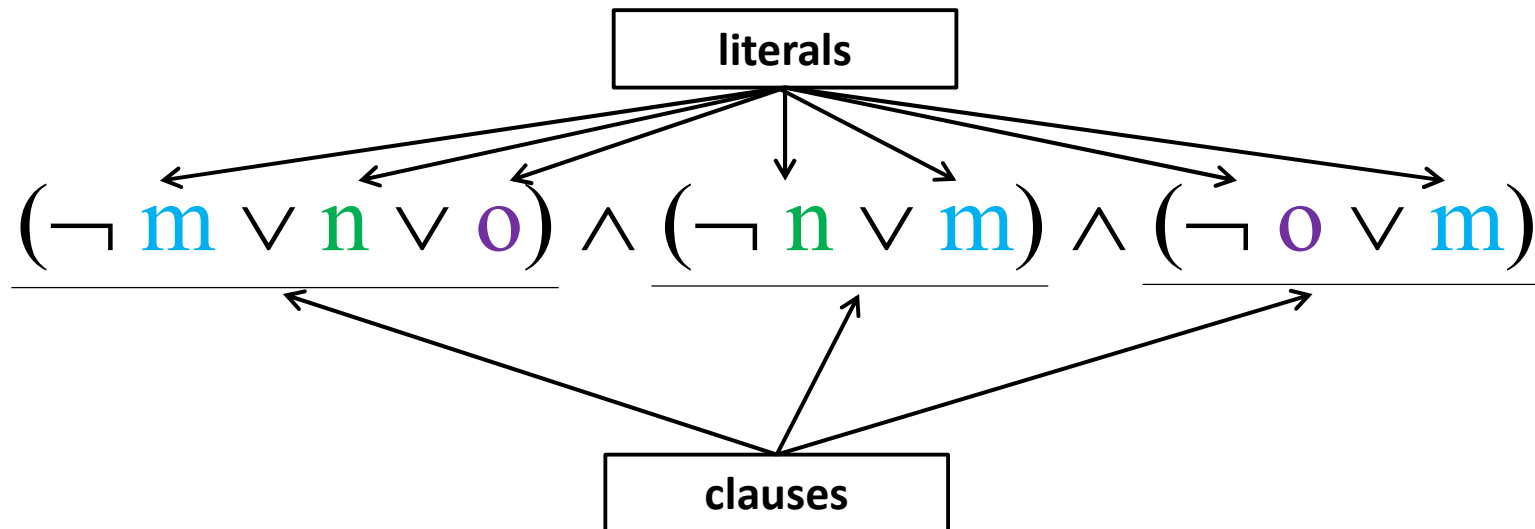

by Distributive law  $p \vee (q \wedge r) \Leftrightarrow (p \vee q) \wedge (p \vee r)$

$$(\neg m \vee n \vee o) \wedge (\neg n \vee m) \wedge (\neg o \vee m)$$

# Conjunctive Normal Form (CNF)

Example:

Sentence  $m \Leftrightarrow (n \vee o)$  converted into CNF:

# CNF Grammar

$CNFSentence \rightarrow Clause_1 \wedge \dots \wedge Clause_n$

$Clause \rightarrow Literal_1 \vee \dots \vee Literal_m$

$Fact \rightarrow Symbol$

$Literal \rightarrow Symbol \mid \neg Symbol$

$Symbol \rightarrow P \mid Q \mid R \mid \dots$

$HornClauseForm \rightarrow DefiniteClauseForm \mid GoalClauseForm$

$DefiniteClauseForm \rightarrow Fact \mid (Symbol_1 \wedge \dots \wedge Symbol_l) \Rightarrow Symbol$

$GoalClauseForm \rightarrow (Symbol_1 \wedge \dots \wedge Symbol_l) \Rightarrow False$

**\* I will:**

- **be using true and false instead of True and False**
- **use lowercase p, q for atomic and uppercase P, Q for complex**

# General Resolution Rule

General resolution rule allows clauses with arbitrary number of literals

$$\frac{(a_1 \vee \dots \vee a_m \vee b), (\neg b \vee c_1 \vee \dots \vee c_n)}{(a_1 \vee \dots \vee a_m \vee c_1 \vee \dots \vee c_n)}$$

where:  $a_i, b, \neg b, c_j$  are **literals**.

# Unit Resolution

General resolution rule allows clauses with arbitrary number of literals

The diagram illustrates the resolution rule. At the top, a box labeled "initial clauses" has two arrows pointing to the two clauses in the expression:  $(a_1 \vee \dots \vee a_m \vee \mathbf{b})$  and  $(\neg \mathbf{b} \vee c_1 \vee \dots \vee c_n)$ . The literal  $\mathbf{b}$  in the first clause and  $\neg \mathbf{b}$  in the second clause are highlighted in green. A horizontal line separates these from the result below. Below the line is the new clause:  $(a_1 \vee \dots \vee a_m \vee c_1 \vee \dots \vee c_n)$ . An arrow points from a box labeled "new clause" to this result.

$$\frac{(a_1 \vee \dots \vee a_m \vee \mathbf{b}), (\neg \mathbf{b} \vee c_1 \vee \dots \vee c_n)}{(a_1 \vee \dots \vee a_m \vee c_1 \vee \dots \vee c_n)}$$

Literals  $\mathbf{b}$  and  $\neg \mathbf{b}$  are **complimentary**. The resolution rule deletes a pair of complimentary literals from two clauses and combines the rest.

# Unit Resolution

General resolution rule allows clauses with arbitrary number of literals

$$\frac{(a_1 \vee \dots \vee a_m \vee \mathbf{b}), (\neg \mathbf{b} \vee c_1 \vee \dots \vee c_n)}{(a_1 \vee \dots \vee a_m \vee c_1 \vee \dots \vee c_n)}$$

initial clauses

derived clause (resolvent)

Literals  $\mathbf{b}$  and  $\neg \mathbf{b}$  are **complimentary**. The clause  $(\mathbf{b} \wedge \neg \mathbf{b})$  is a **contradiction** (an empty clause).

# Unit Resolution

General resolution rule allows clauses with arbitrary number of literals

$$\frac{(a_1 \vee \dots \vee a_m \vee \mathbf{b}), (\neg \mathbf{b} \vee c_1 \vee \dots \vee c_n)}{(a_1 \vee \dots \vee a_m \vee c_1 \vee \dots \vee c_n)}$$

Literals  $\mathbf{b}$  and  $\neg \mathbf{b}$  are **complimentary**. The resolution rule deletes a pair of complimentary literals from two clauses and combines the rest.

# Factorization

Occasionally, unit resolution will produce a new clause with the the following clause (**d**  $\vee$  **d**):

$$\frac{(a_1 \vee \dots \vee a_m \vee \mathbf{d} \vee b), (\neg b \vee c_1 \vee \dots \vee c_n \vee \mathbf{d})}{(a_1 \vee \dots \vee a_m \vee c_1 \vee \dots \vee c_n \vee \mathbf{d} \vee \mathbf{d})}$$

Disjunction of multiple copies of literals (**d**  $\vee$  **d**) can be replaced by a single literal **d**. This is called **factorization**.

# Resolution and Factorization

In this example resolution along with factorization will generate a new clause:

$$\frac{(a_1 \vee \dots \vee a_m \vee \mathbf{d} \vee \mathbf{b}), (\neg \mathbf{b} \vee c_1 \vee \dots \vee c_n \vee \mathbf{d})}{(a_1 \vee \dots \vee a_m \vee c_1 \vee \dots \vee c_n \vee \mathbf{d})}$$

Clause is  $(\mathbf{d} \vee \mathbf{d})$  is replaced by a single literal  $\mathbf{d}$ .

This is called **factorization**. Contradiction  $(\mathbf{b} \wedge \neg \mathbf{b})$  becomes an “**empty clause**” and is removed.

# Proof by Resolution

The process of proving by resolution is as follows:

- A. Formalize the problem: “English to Propositional Logic”
- B. derive  $KB \wedge \neg Q$
- C. convert  $KB \wedge \neg Q$  into CNF (“standardized”) form
- D. Apply resolution rule to resulting clauses. New clauses will be generated (add them to the set if not already present)
- E. Repeat (C) until:
  - a. no new clause can be added ( $KB$  does NOT entail  $Q$ )
  - b. last two clauses resolve to yield the empty clause ( $KB$  entails  $Q$ )

# Logical Entailment

So far, we have been asking the question:

“Does **KB** entail **Q** (does **Q** follow from **KB**)?”

**KB**  $\square$  **Q**

But we could ask the following question:

“Which **Q**s follow from **KB**?”

# Logical Entailment

But we could ask the following question:

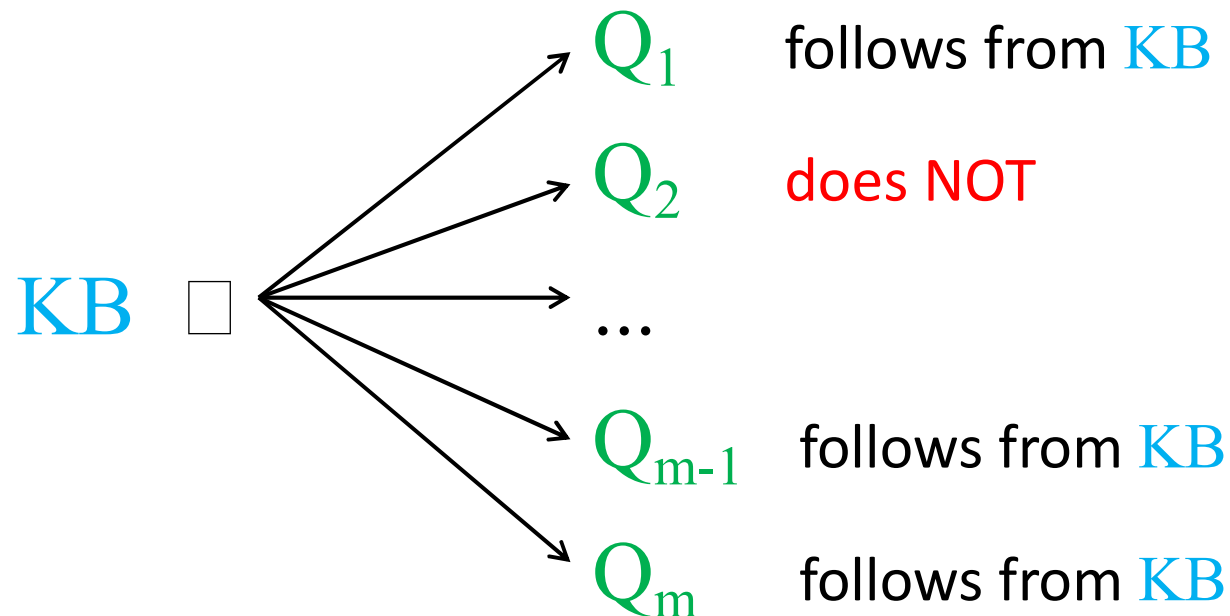

“Which  $Q$ s follow from  $KB$ ?”

# Logical Entailment

But we could ask the following question:

“Which  $Q$ s follow from  $KB$ ?”

# KB Agents

**Sentences are physical configurations of the agent, and reasoning is a process of constructing new physical configurations from old ones.**

**Logical reasoning should ensure that the new configurations represent aspects of the world that actually follow from the aspects that the old configurations represent.**

# Knowledge-based Agents

**function** KB-AGENT(*percept*) **returns** an *action*  
**persistent:** *KB*, a knowledge base  
*t*, a counter, initially 0, indicating time

KBBEFORE

TELL(*KB*, MAKE-PERCEPT-SENTENCE(*percept*, *t*))  
*action*  $\leftarrow$  ASK(*KB*, MAKE-ACTION-QUERY(*t*))  
TELL(*KB*, MAKE-ACTION-SENTENCE(*action*, *t*))  
*t*  $\leftarrow$  *t* + 1  
**return** *action*

CURRENTKB

new *percept*

$\text{CURRENTKB} \Leftrightarrow \text{KBBEFORE} \wedge \text{new percept}$

# Logical Entailment with KB Agents

But we could ask the following question:

“Which **ACTION**s follow from **CURRENTKB**?”

# Logical Entailment with KB Agents

But we could ask the following question:

“Which **ACTION**s follow from **CURRENTKB**?”

# Logical Entailment with KB Agents

Let's try a simpler example with just ONE ACTION to consider. The question is:

“Does ACTION follow from CURRENTKB?”

Test / prove:

$(\text{KB}_{\text{BEFORE}} \wedge \text{percept}) \sqsubseteq \text{ACTION}$  follows from

to decide whether to apply ACTION or not.

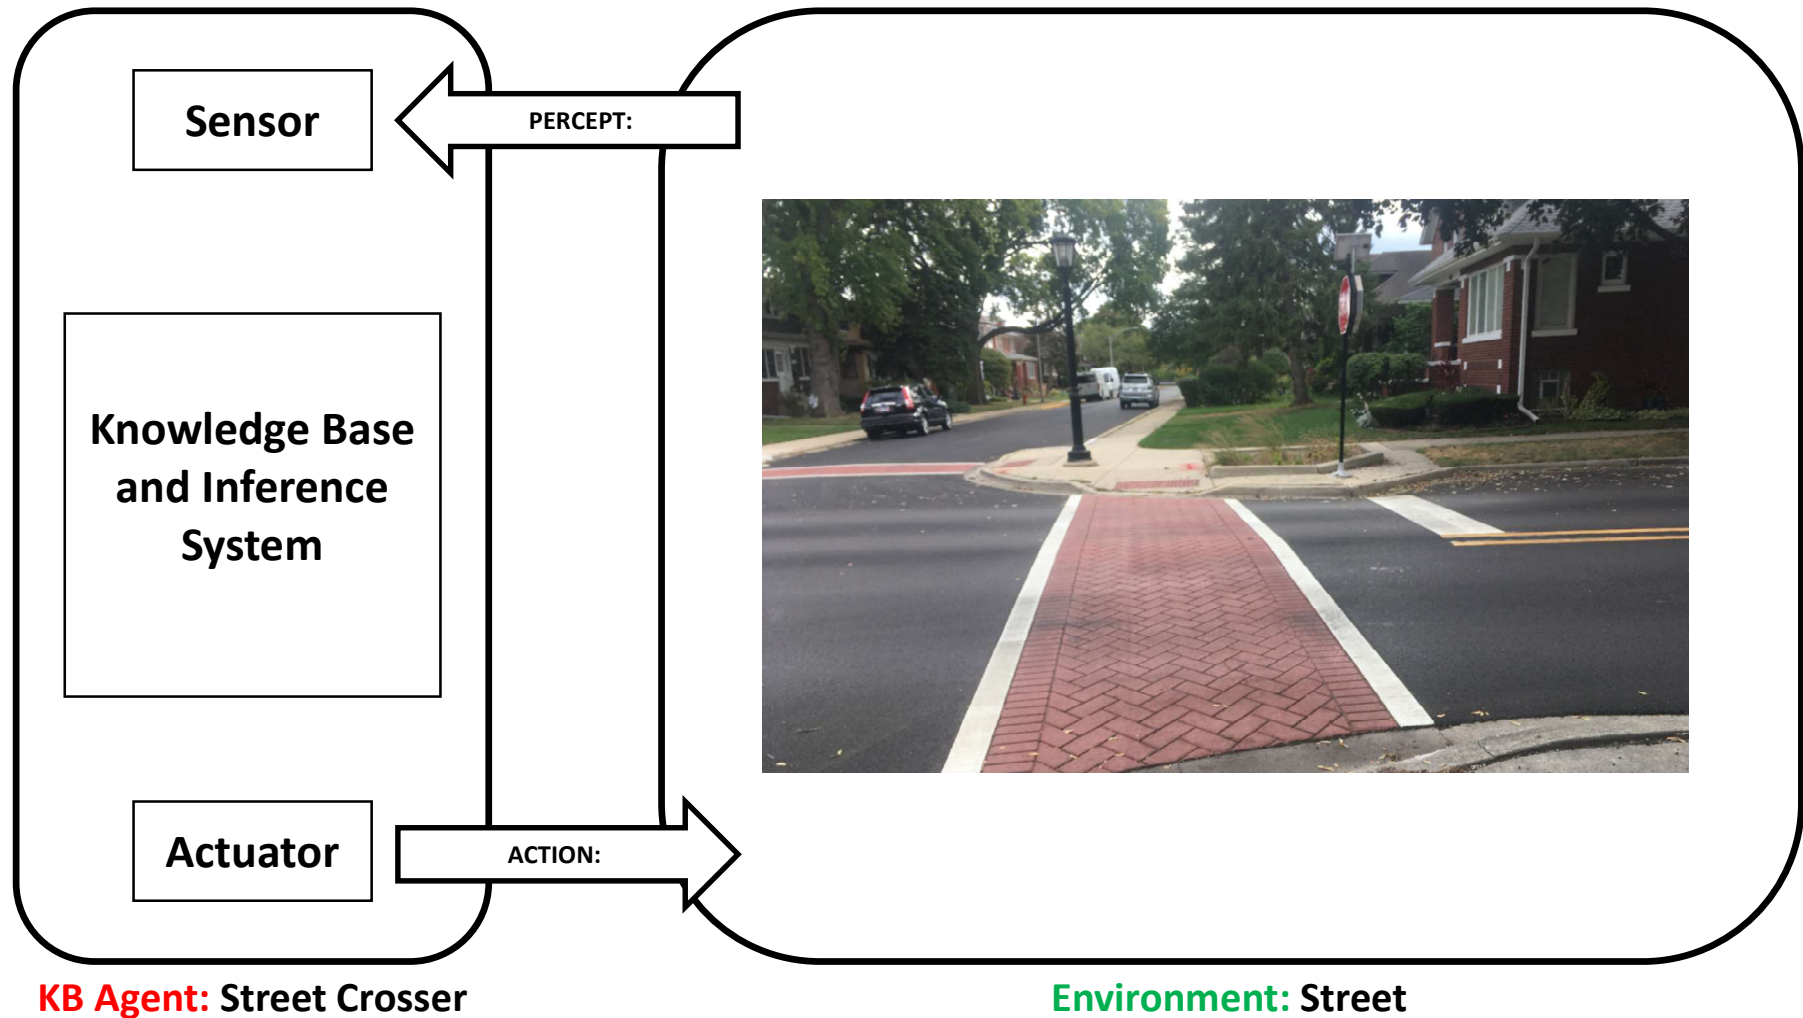

# KB Agent: Should I Stay or Should I Go

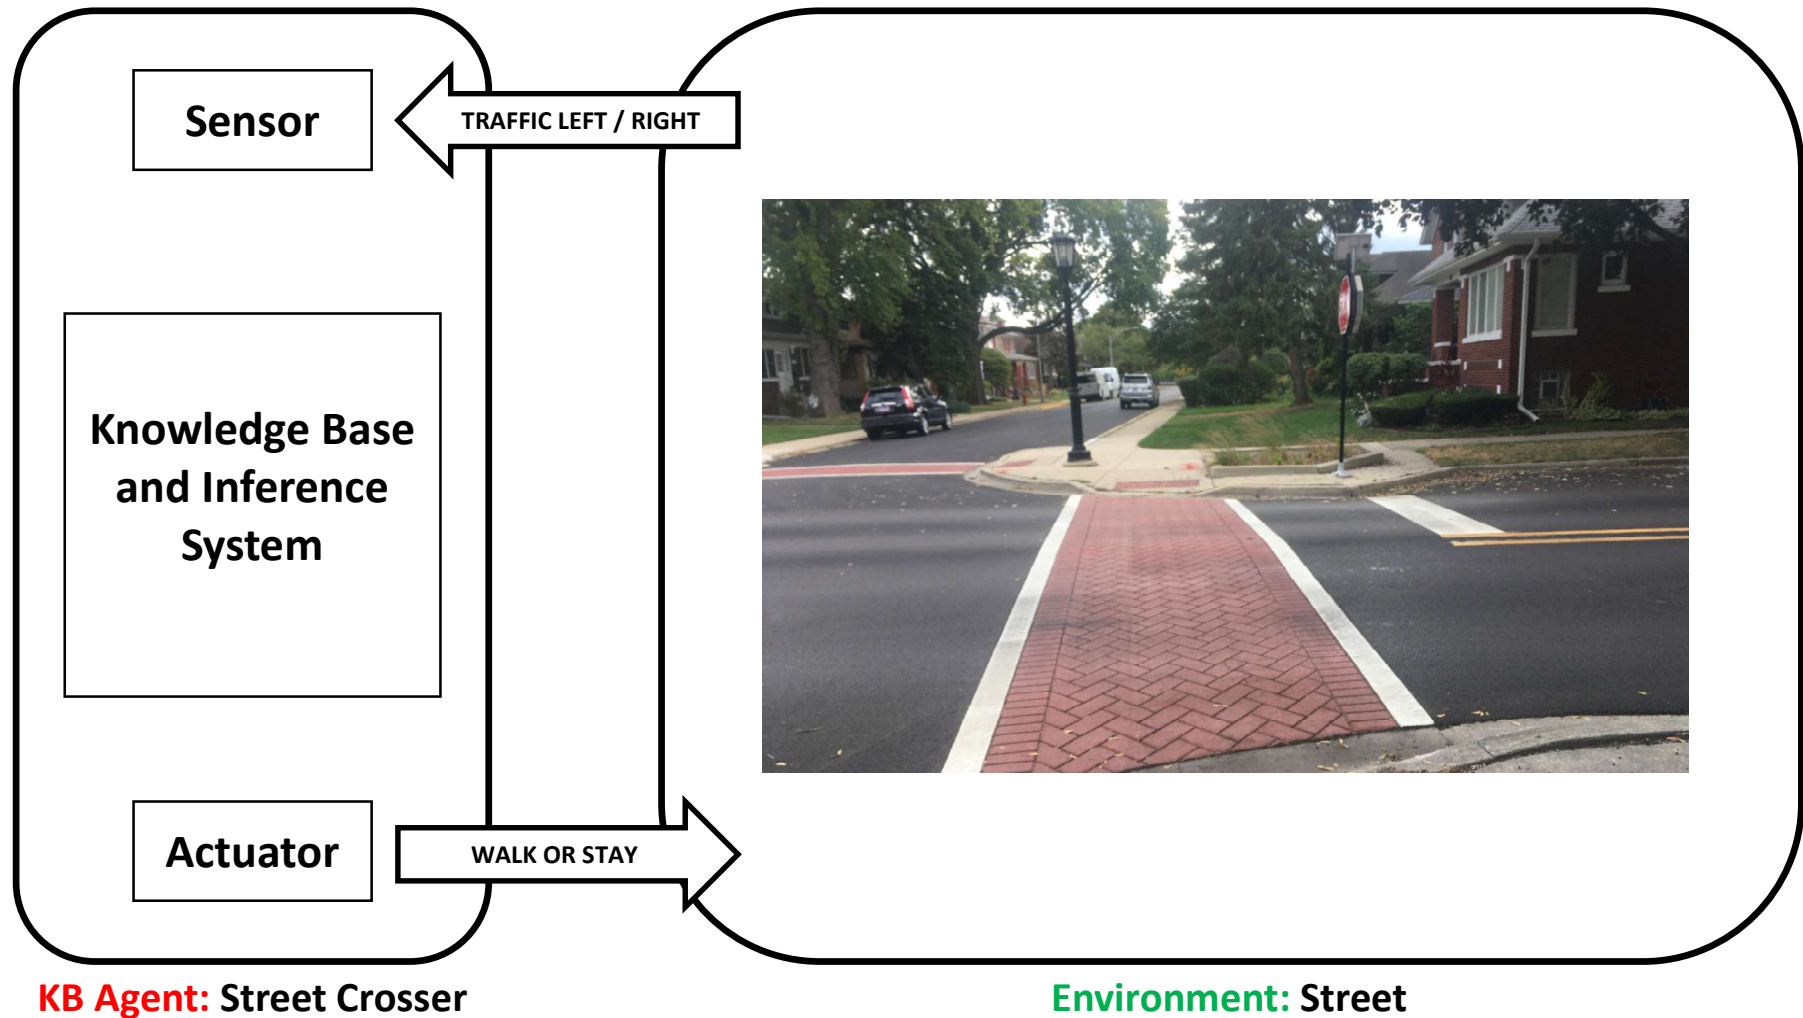

**Problem: KB Agent wants to cross the street. Traffic comes from left and right. KB agent cannot cross if there is ANY traffic (ignore the STOP sign).**

# KB Agent: Should I Stay or Should I Go

# KB Agent: Should I Stay or Should I Go

# Proof by Resolution

The process of proving by resolution is as follows:

- A. Formalize the problem: “English to Propositional Logic”
- B. derive  $KB \wedge \neg Q$
- C. convert  $KB \wedge \neg Q$  into CNF (“standardized”) form
- D. Apply resolution rule to resulting clauses. New clauses will be generated (add them to the set if not already present)
- E. Repeat (C) until:
  - a. no new clause can be added ( $KB$  does NOT entail  $Q$ )
  - b. last two clauses resolve to yield the empty clause ( $KB$  entails  $Q$ )

# Street Crosser: Knowledge Base KB

English:

A: “Walk if and only if there is NO traffic coming from the left AND NO traffic coming from the right.”

or

B: “DON’T walk if and only if there is traffic coming from the left OR traffic coming from the right.”

# Street Crosser: Knowledge Base KB

## English and Propositional Logic:

A: “Walk if and only if there is NO traffic coming from the left AND NO traffic coming from the right.”

$$\text{walk} \Leftrightarrow (\neg \text{trafficLeft} \wedge \neg \text{trafficRight})$$

or

B: “DON'T walk if and only if there is traffic coming from the left OR traffic coming from the right.”

$$\neg \text{walk} \Leftrightarrow (\text{trafficLeft} \vee \text{trafficRight})$$

# Street Crosser: Convert KB to CNF

Variant A:  $\text{KB} \equiv \text{walk} \Leftrightarrow (\neg \text{trafficLeft} \wedge \neg \text{trafficRight})$

$$(\text{walk} \Rightarrow (\neg \text{trafficLeft} \wedge \neg \text{trafficRight})) \wedge ((\neg \text{trafficLeft} \wedge \neg \text{trafficRight}) \Rightarrow \text{walk})$$

by Biconditional Elimination

$$(\neg \text{walk} \vee (\neg \text{trafficLeft} \wedge \neg \text{trafficRight})) \wedge (\neg(\neg \text{trafficLeft} \wedge \neg \text{trafficRight}) \vee \text{walk})$$

by Implication Elimination

$$((\neg \text{walk} \vee \neg \text{trafficLeft}) \wedge (\neg \text{walk} \vee \neg \text{trafficRight})) \wedge (\neg(\neg \text{trafficLeft} \wedge \neg \text{trafficRight}) \vee \text{walk})$$

by Distributivity Rule

$$((\neg \text{walk} \vee \neg \text{trafficLeft}) \wedge (\neg \text{walk} \vee \neg \text{trafficRight})) \wedge ((\neg \neg \text{trafficLeft} \vee \neg \neg \text{trafficRight}) \vee \text{walk})$$

by De Morgan's Rule

$$((\neg \text{walk} \vee \neg \text{trafficLeft}) \wedge (\neg \text{walk} \vee \neg \text{trafficRight})) \wedge ((\text{trafficLeft} \vee \text{trafficRight}) \vee \text{walk})$$

by Double Negation Elimination

$$(\neg \text{walk} \vee \neg \text{trafficLeft}) \wedge (\neg \text{walk} \vee \neg \text{trafficRight}) \wedge (\text{trafficLeft} \vee \text{trafficRight} \vee \text{walk})$$

remove extraneous parentheses

# Street Crosser: Convert KB to CNF

**Variant B:**  $\text{KB} \equiv \neg \text{walk} \Leftrightarrow (\text{trafficLeft} \vee \text{trafficRight})$

$$(\neg \text{walk} \Rightarrow (\text{trafficLeft} \vee \text{trafficRight})) \wedge ((\text{trafficLeft} \vee \text{trafficRight}) \Rightarrow \neg \text{walk})$$

by Biconditional Elimination

$$(\neg(\neg \text{walk}) \vee (\text{trafficLeft} \vee \text{trafficRight})) \wedge (\neg(\text{trafficLeft} \vee \text{trafficRight}) \vee \neg \text{walk})$$

by Implication Elimination

$$(\text{walk} \vee (\text{trafficLeft} \vee \text{trafficRight})) \wedge (\neg(\text{trafficLeft} \vee \text{trafficRight}) \vee \neg \text{walk})$$

by Double Negation Elimination

$$(\text{walk} \vee (\text{trafficLeft} \vee \text{trafficRight})) \wedge ((\neg \text{trafficLeft} \wedge \neg \text{trafficRight}) \vee \neg \text{walk})$$

by De Morgan's Rule

$$(\text{walk} \vee (\text{trafficLeft} \vee \text{trafficRight})) \wedge ((\neg \text{trafficLeft} \vee \neg \text{walk}) \wedge (\neg \text{trafficRight} \vee \neg \text{walk}))$$

by Distributivity Rule

$$(\text{walk} \vee \text{trafficLeft} \vee \text{trafficRight}) \wedge (\neg \text{trafficLeft} \vee \neg \text{walk}) \wedge (\neg \text{trafficRight} \vee \neg \text{walk})$$

remove extraneous parentheses

# Should I **Go**: Proof by Resolution

We have our knowledge base KB in CNF ready:

$$KB \equiv (\neg \text{walk} \vee \neg \text{trafficLeft}) \wedge (\neg \text{walk} \vee \neg \text{trafficRight}) \wedge (\text{trafficLeft} \vee \text{trafficRight} \vee \text{walk})$$

Let's rename propositional variables to simplify:

$$KB \equiv (\text{w} \vee \text{tL} \vee \text{tR}) \wedge (\neg \text{tL} \vee \neg \text{w}) \wedge (\neg \text{tR} \vee \neg \text{w})$$

Assume that traffic is coming from both left and right (percepts):

$$\text{PERCEPTS} \equiv (\text{tR}) \wedge (\text{tL})$$

Let's add (TELL) PERCEPTS to the Knowledge Base KB:

$$KB_N \equiv KB \wedge \text{PERCEPTS}$$

$$KB_N \equiv (\text{w} \vee \text{tL} \vee \text{tR}) \wedge (\neg \text{tL} \vee \neg \text{w}) \wedge (\neg \text{tR} \vee \neg \text{w}) \wedge (\text{tR}) \wedge (\text{tL})$$

Our query Q is “**Should I (choose action) walk?**”:

$$Q \equiv \text{w} \text{ (and in negated form: } \neg Q \equiv \neg \text{w)}$$

To test / prove entailment I want to prove that  $KB_N \wedge \neg Q$  is true:

$$KB_N \wedge \neg Q \equiv (\text{w} \vee \text{tL} \vee \text{tR}) \wedge (\neg \text{tL} \vee \neg \text{w}) \wedge (\neg \text{tR} \vee \neg \text{w}) \wedge (\text{tR}) \wedge (\text{tL}) \wedge (\neg \text{w})$$

$$(\text{w} \vee \text{tL} \vee \text{tR})_1 \wedge (\neg \text{tL} \vee \neg \text{w})_2 \wedge (\neg \text{tR} \vee \neg \text{w})_3 \wedge (\text{tR})_4 \wedge (\text{tL})_5 \wedge (\neg \text{w})_6$$

# Should I Go: Proof by Resolution

Prove:

$$\text{KB}_N \wedge \neg Q \equiv$$
$$(\textcolor{blue}{w} \vee \textcolor{green}{tL} \vee \textcolor{red}{tR})_1 \wedge (\neg \textcolor{green}{tL} \vee \neg \textcolor{blue}{w})_2 \wedge (\neg \textcolor{red}{tR} \vee \neg \textcolor{blue}{w})_3 \wedge (\textcolor{red}{tR})_4 \wedge (\textcolor{green}{tL})_5 \wedge (\neg \textcolor{blue}{w})_6$$

# Should I Go: Proof by Resolution

Prove:

$$\text{KB}_N \wedge \neg Q \equiv \\ (\text{w} \vee \text{tL} \vee \text{tR})_1 \wedge (\neg \text{tL} \vee \neg \text{w})_2 \wedge (\neg \text{tR} \vee \neg \text{w})_3 \wedge (\text{tR})_4 \wedge (\text{tL})_5 \wedge (\neg \text{w})_6$$

Known clauses:

1. ( $\text{w} \vee \text{tL} \vee \text{tR}$ )
2. ( $\neg \text{tL} \vee \neg \text{w}$ )
3. ( $\neg \text{tR} \vee \neg \text{w}$ )
4. ( $\text{tR}$ )
5. ( $\text{tL}$ )
6. ( $\neg \text{w}$ )

Added clauses:

# Proof by Resolution: Example

Prove:

$$\text{KB}_N \wedge \neg Q \equiv \\ (\text{w} \vee \text{tL} \vee \text{tR})_1 \wedge (\neg \text{tL} \vee \neg \text{w})_2 \wedge (\neg \text{tR} \vee \neg \text{w})_3 \wedge (\text{tR})_4 \wedge (\text{tL})_5 \wedge (\neg \text{w})_6$$

Known clauses:

1. ( $\text{w} \vee \text{tL} \vee \text{tR}$ )
2. ( $\neg \text{tL} \vee \neg \text{w}$ )
3. ( $\neg \text{tR} \vee \neg \text{w}$ )
4. ( $\text{tR}$ )
5. ( $\text{tL}$ )
6. ( $\neg \text{w}$ )

Added clauses:

7. ( $\text{tL} \vee \text{tR}$ )

Resolution applied to clauses 1 and 6

$$\frac{(\text{w} \vee \text{tL} \vee \text{tR}), (\neg \text{w})}{(\text{tL} \vee \text{tR})}$$

Produces a new clause ( $\text{tL} \vee \text{tR}$ ). We can add it to the list as clause (7).

# Proof by Resolution: Example

Prove:

$$\text{KB}_N \wedge \neg Q \equiv \\ (\text{w} \vee \text{tL} \vee \text{tR})_1 \wedge (\neg \text{tL} \vee \neg \text{w})_2 \wedge (\neg \text{tR} \vee \neg \text{w})_3 \wedge (\text{tR})_4 \wedge (\text{tL})_5 \wedge (\neg \text{w})_6$$

Known clauses:

1. ( $\text{w} \vee \text{tL} \vee \text{tR}$ )
2. ( $\neg \text{tL} \vee \neg \text{w}$ )
3. ( $\neg \text{tR} \vee \neg \text{w}$ )
4. ( $\text{tR}$ )
5. ( $\text{tL}$ )
6. ( $\neg \text{w}$ )

Added clauses:

7. ( $\text{tL} \vee \text{tR}$ )

Resolution applied to clauses 2 and 5

$$(\neg \text{tL} \vee \neg \text{w}), (\text{tL})$$

---

$$(\neg \text{w})$$

Produces a clause ( $\neg \text{w}$ ), but we already have it (6). Don't add it to the list.

# Proof by Resolution: Example

Prove:

$$\text{KB}_N \wedge \neg Q \equiv \\ (\text{w} \vee \text{tL} \vee \text{tR})_1 \wedge (\neg \text{tL} \vee \neg \text{w})_2 \wedge (\neg \text{tR} \vee \neg \text{w})_3 \wedge (\text{tR})_4 \wedge (\text{tL})_5 \wedge (\neg \text{w})_6$$

Known clauses:

1. ( $\text{w} \vee \text{tL} \vee \text{tR}$ )
2. ( $\neg \text{tL} \vee \neg \text{w}$ )
3. ( $\neg \text{tR} \vee \neg \text{w}$ )
4. ( $\text{tR}$ )
5. ( $\text{tL}$ )
6. ( $\neg \text{w}$ )

Added clauses:

7. ( $\text{tL} \vee \text{tR}$ )

Resolution applied to clauses 3 and 4

$$(\neg \text{tR} \vee \neg \text{w}), (\text{tR})$$

---

$$(\neg \text{w})$$

Produces a clause ( $\neg \text{w}$ ), but we already have it (6). Don't add it to the list.

# Proof by Resolution: Example

Prove:

$$\text{KB}_N \wedge \neg Q \equiv$$
$$(\text{w} \vee \text{tL} \vee \text{tR})_1 \wedge (\neg \text{tL} \vee \neg \text{w})_2 \wedge (\neg \text{tR} \vee \neg \text{w})_3 \wedge (\text{tR})_4 \wedge (\text{tL})_5 \wedge (\neg \text{w})_6$$

Known clauses:

1. ( $\text{w} \vee \text{tL} \vee \text{tR}$ )
2. ( $\neg \text{tL} \vee \neg \text{w}$ )
3. ( $\neg \text{tR} \vee \neg \text{w}$ )
4. ( $\text{tR}$ )
5. ( $\text{tL}$ )
6. ( $\neg \text{w}$ )

Added clauses:

7. ( $\text{tL} \vee \text{tR}$ )
8. ( $\neg \text{w} \vee \text{tR}$ )

Resolution applied to clauses 2 and 7

$$(\neg \text{tL} \vee \neg \text{w}), (\text{tL} \vee \text{tR})$$

---

$$(\neg \text{w} \vee \text{tR})$$

Produces a new clause ( $\neg \text{w} \vee \text{tR}$ ). We can add it to the list as clause (8).

# Proof by Resolution: Example

Prove:

$$\text{KB}_N \wedge \neg Q \equiv$$
$$(\text{w} \vee \text{tL} \vee \text{tR})_1 \wedge (\neg \text{tL} \vee \neg \text{w})_2 \wedge (\neg \text{tR} \vee \neg \text{w})_3 \wedge (\text{tR})_4 \wedge (\text{tL})_5 \wedge (\neg \text{w})_6$$

Known clauses:

1. ( $\text{w} \vee \text{tL} \vee \text{tR}$ )
2. ( $\neg \text{tL} \vee \neg \text{w}$ )
3. ( $\neg \text{tR} \vee \neg \text{w}$ )
4. ( $\text{tR}$ )
5. ( $\text{tL}$ )
6. ( $\neg \text{w}$ )

Added clauses:

7. ( $\text{tL} \vee \text{tR}$ )
8. ( $\neg \text{w} \vee \text{tR}$ )

Resolution applied to clauses 1 and 8

$$\frac{(\text{w} \vee \text{tL} \vee \text{tR}), (\neg \text{w} \vee \text{tR})}{(\text{tL} \vee \text{tR})}$$

Produces a clause ( $\text{tL} \vee \text{tR}$ ), but we already have it (7). Don't add it to the list.

# Proof by Resolution: Example

Prove:

$$\text{KB}_N \wedge \neg Q \equiv \\ (\text{w} \vee \text{tL} \vee \text{tR})_1 \wedge (\neg \text{tL} \vee \neg \text{w})_2 \wedge (\neg \text{tR} \vee \neg \text{w})_3 \wedge (\text{tR})_4 \wedge (\text{tL})_5 \wedge (\neg \text{w})_6$$

Resolution applied to clauses 3 and 8

$$\frac{(\neg \text{tR} \vee \neg \text{w}), (\neg \text{w} \vee \text{tR})}{(\neg \text{w})}$$

Produces a clause  $(\neg \text{w})$ , but we already have it (6). Don't add it to the list.

Known clauses:

1.  $(\text{w} \vee \text{tL} \vee \text{tR})$
2.  $(\neg \text{tL} \vee \neg \text{w})$
3.  $(\neg \text{tR} \vee \neg \text{w})$
4.  $(\text{tR})$
5.  $(\text{tL})$
6.  $(\neg \text{w})$

Added clauses:

7.  $(\text{tL} \vee \text{tR})$
8.  $(\neg \text{w} \vee \text{tR})$

# Proof by Resolution: Example

Prove:

$$\text{KB}_N \wedge \neg Q \equiv \\ (\text{w} \vee \text{tL} \vee \text{tR})_1 \wedge (\neg \text{tL} \vee \neg \text{w})_2 \wedge (\neg \text{tR} \vee \neg \text{w})_3 \wedge (\text{tR})_4 \wedge (\text{tL})_5 \wedge (\neg \text{w})_6$$

Resolution applied to clauses 3 and 7

$$\frac{(\neg \text{tR} \vee \neg \text{w}), (\text{tL} \vee \text{tR})}{(\neg \text{w} \vee \text{tL})}$$

Produces a new clause  $(\neg \text{w} \vee \text{tL})$ . We can add it to the list as clause (9).

Known clauses:

1.  $(\text{w} \vee \text{tL} \vee \text{tR})$
2.  $(\neg \text{tL} \vee \neg \text{w})$
3.  $(\neg \text{tR} \vee \neg \text{w})$
4.  $(\text{tR})$
5.  $(\text{tL})$
6.  $(\neg \text{w})$

Added clauses:

7.  $(\text{tL} \vee \text{tR})$
8.  $(\neg \text{w} \vee \text{tR})$
9.  $(\neg \text{w} \vee \text{tL})$

# Proof by Resolution: Example

Prove:

$$\text{KB}_N \wedge \neg Q \equiv \\ (\text{w} \vee \text{tL} \vee \text{tR})_1 \wedge (\neg \text{tL} \vee \neg \text{w})_2 \wedge (\neg \text{tR} \vee \neg \text{w})_3 \wedge (\text{tR})_4 \wedge (\text{tL})_5 \wedge (\neg \text{w})_6$$

Resolution applied to clauses 2 and 9

$$\frac{(\neg \text{tL} \vee \neg \text{w}), (\neg \text{w} \vee \text{tL})}{(\neg \text{w})}$$

Produces a clause  $(\neg \text{w})$ , but we already have it (6). Don't add it to the list.

Known clauses:

1.  $(\text{w} \vee \text{tL} \vee \text{tR})$
2.  $(\neg \text{tL} \vee \neg \text{w})$
3.  $(\neg \text{tR} \vee \neg \text{w})$
4.  $(\text{tR})$
5.  $(\text{tL})$
6.  $(\neg \text{w})$

Added clauses:

7.  $(\text{tL} \vee \text{tR})$
8.  $(\neg \text{w} \vee \text{tR})$
9.  $(\neg \text{w} \vee \text{tL})$

# Proof by Resolution: Example

Prove:

$$\text{KB}_N \wedge \neg Q \equiv \\ (\text{w} \vee \text{tL} \vee \text{tR})_1 \wedge (\neg \text{tL} \vee \neg \text{w})_2 \wedge (\neg \text{tR} \vee \neg \text{w})_3 \wedge (\text{tR})_4 \wedge (\text{tL})_5 \wedge (\neg \text{w})_6$$

At this point, we tried to resolve all promising clause pairs, but we have not reached an empty clause  $\rightarrow$  KB **does NOT entail** Q.

Given PERCEPTS:  $(\text{tR}) \wedge (\text{tL})$

we should NOT apply action walk (**w**) and **stay**.

Known clauses:

1. (**w**  $\vee$  **tL**  $\vee$  **tR**)
2. ( $\neg$ **tL**  $\vee$   $\neg$ **w**)
3. ( $\neg$ **tR**  $\vee$   $\neg$ **w**)
4. (**tR**)
5. (**tL**)
6. ( $\neg$ **w**)

Added clauses:

7. (**tL**  $\vee$  **tR**)
8. ( $\neg$ **w**  $\vee$  **tR**)
9. ( $\neg$ **w**  $\vee$  **tL**)

# Should I **Go**: Proof by Resolution

We have our knowledge base KB in CNF ready:

$$KB \equiv (\neg \text{walk} \vee \neg \text{trafficLeft}) \wedge (\neg \text{walk} \vee \neg \text{trafficRight}) \wedge (\text{trafficLeft} \vee \text{trafficRight} \vee \text{walk})$$

Let's rename propositional variables to simplify:

$$KB \equiv (\text{w} \vee \text{tL} \vee \text{tR}) \wedge (\neg \text{tL} \vee \neg \text{w}) \wedge (\neg \text{tR} \vee \neg \text{w})$$

Assume that traffic is **NOT** coming from both left and right (percepts):

$$\text{PERCEPTS} \equiv (\neg \text{tR}) \wedge (\neg \text{tL})$$

Let's add (TELL) PERCEPTS to the Knowledge Base KB:

$$KB_N \equiv KB \wedge \text{PERCEPTS}$$

$$KB_N \equiv (\text{w} \vee \text{tL} \vee \text{tR}) \wedge (\neg \text{tL} \vee \neg \text{w}) \wedge (\neg \text{tR} \vee \neg \text{w}) \wedge (\neg \text{tR}) \wedge (\neg \text{tL})$$

Our query Q is “**Should I (choose action) walk?**”:

$$Q \equiv \text{w} \text{ (and in negated form: } \neg Q \equiv \neg \text{w)}$$

To test / prove entailment I want to prove that  $KB_N \wedge \neg Q$  is true:

$$KB_N \wedge \neg Q \equiv (\text{w} \vee \text{tL} \vee \text{tR}) \wedge (\neg \text{tL} \vee \neg \text{w}) \wedge (\neg \text{tR} \vee \neg \text{w}) \wedge (\neg \text{tR}) \wedge (\neg \text{tL}) \wedge (\neg \text{w})$$

$$(\text{w} \vee \text{tL} \vee \text{tR})_1 \wedge (\neg \text{tL} \vee \neg \text{w})_2 \wedge (\neg \text{tR} \vee \neg \text{w})_3 \wedge (\neg \text{tR})_4 \wedge (\neg \text{tL})_5 \wedge (\neg \text{w})_6$$

# Should I Go: Proof by Resolution

Prove:

$$KB_N \wedge \neg Q \equiv$$

$$(\textcolor{blue}{w} \vee \textcolor{green}{tL} \vee \textcolor{red}{tR})_1 \wedge (\neg \textcolor{green}{tL} \vee \neg \textcolor{blue}{w})_2 \wedge (\neg \textcolor{red}{tR} \vee \neg \textcolor{blue}{w})_3 \wedge (\neg \textcolor{red}{tR})_4 \wedge (\neg \textcolor{green}{tL})_5 \wedge (\neg \textcolor{blue}{w})_6$$

# Should I Go: Proof by Resolution

Prove:

$$KB_N \wedge \neg Q \equiv$$

$$(w \vee tL \vee tR)_1 \wedge (\neg tL \vee \neg w)_2 \wedge (\neg tR \vee \neg w)_3 \wedge (\neg tR)_4 \wedge (\neg tL)_5 \wedge (\neg w)_6$$

Known clauses:

1. ( $w \vee tL \vee tR$ )
2. ( $\neg tL \vee \neg w$ )
3. ( $\neg tR \vee \neg w$ )
4. ( $\neg tR$ )
5. ( $\neg tL$ )
6. ( $\neg w$ )

Added clauses:

# Proof by Resolution: Example

Prove:

$$\text{KB}_N \wedge \neg Q \equiv$$
$$(\text{w} \vee \text{tL} \vee \text{tR})_1 \wedge (\neg \text{tL} \vee \neg \text{w})_2 \wedge (\neg \text{tR} \vee \neg \text{w})_3 \wedge (\neg \text{tR})_4 \wedge (\neg \text{tL})_5 \wedge (\neg \text{w})_6$$

Known clauses:

1. ( $\text{w} \vee \text{tL} \vee \text{tR}$ )
2. ( $\neg \text{tL} \vee \neg \text{w}$ )
3. ( $\neg \text{tR} \vee \neg \text{w}$ )
4. ( $\neg \text{tR}$ )
5. ( $\neg \text{tL}$ )
6. ( $\neg \text{w}$ )

Added clauses:

7. ( $\text{tL} \vee \text{tR}$ )

Resolution applied to clauses 1 and 6

$$(\text{w} \vee \text{tL} \vee \text{tR}), (\neg \text{w})$$

---

$$(\text{tL} \vee \text{tR})$$

Produces a new clause ( $\text{tL} \vee \text{tR}$ ). We can add it to the list as clause (7).

# Proof by Resolution: Example

Prove:

$$\text{KB}_N \wedge \neg Q \equiv$$
$$(\text{w} \vee \text{tL} \vee \text{tR})_1 \wedge (\neg \text{tL} \vee \neg \text{w})_2 \wedge (\neg \text{tR} \vee \neg \text{w})_3 \wedge (\neg \text{tR})_4 \wedge (\neg \text{tL})_5 \wedge (\neg \text{w})_6$$

Known clauses:

1.  $(\text{w} \vee \text{tL} \vee \text{tR})$
2.  $(\neg \text{tL} \vee \neg \text{w})$
3.  $(\neg \text{tR} \vee \neg \text{w})$
4.  $(\neg \text{tR})$
5.  $(\neg \text{tL})$
6.  $(\neg \text{w})$

Added clauses:

7.  $(\text{tL} \vee \text{tR})$
8.  $(\text{tL})$

Resolution applied to clauses 4 and 7

$$\frac{(\neg \text{tR}), (\text{tL} \vee \text{tR})}{(\text{tL})}$$

Produces a new clause  $(\text{tL})$ . We can add it to the list as clause (8).

# Proof by Resolution: Example

Prove:

$$KB_N \wedge \neg Q \equiv$$

$$(\textcolor{blue}{w} \vee \textcolor{green}{tL} \vee \textcolor{red}{tR})_1 \wedge (\neg \textcolor{green}{tL} \vee \neg \textcolor{blue}{w})_2 \wedge (\neg \textcolor{red}{tR} \vee \neg \textcolor{blue}{w})_3 \wedge (\neg \textcolor{red}{tR})_4 \wedge (\neg \textcolor{green}{tL})_5 \wedge (\neg \textcolor{blue}{w})_6$$

Known clauses:

1.  $(\textcolor{blue}{w} \vee \textcolor{green}{tL} \vee \textcolor{red}{tR})$
2.  $(\neg \textcolor{green}{tL} \vee \neg \textcolor{blue}{w})$
3.  $(\neg \textcolor{red}{tR} \vee \neg \textcolor{blue}{w})$
4.  $(\neg \textcolor{red}{tR})$
5.  $(\neg \textcolor{green}{tL})$
6.  $(\neg \textcolor{blue}{w})$

Added clauses:

7.  $(\textcolor{green}{tL} \vee \textcolor{red}{tR})$
8.  $(\textcolor{green}{tL})$

Resolution applied to clauses 5 and 8

$$(\neg \textcolor{green}{tL}), (\textcolor{green}{tL})$$

---

$$()$$

Produces an empty clause / contradiction. Stop.

# Proof by Resolution: Example

Prove:

$$\text{KB}_N \wedge \neg Q \equiv$$
$$(\textcolor{blue}{w} \vee \textcolor{green}{tL} \vee \textcolor{red}{tR})_1 \wedge (\neg \textcolor{green}{tL} \vee \neg \textcolor{blue}{w})_2 \wedge (\neg \textcolor{red}{tR} \vee \neg \textcolor{blue}{w})_3 \wedge (\neg \textcolor{red}{tR})_4 \wedge (\neg \textcolor{green}{tL})_5 \wedge (\neg \textcolor{blue}{w})_6$$

At this point, we tried to resolve all promising clause pairs and we reached an empty clause  $\rightarrow$  KB **entails** Q.

Given PERCEPTS:  $(\neg \textcolor{red}{tR}) \wedge (\neg \textcolor{green}{tL})$

we should apply action walk (**w**) and **go**.

Known clauses:

1. (**w**  $\vee$  **tL**  $\vee$  **tR**)
2. ( $\neg$ **tL**  $\vee$   $\neg$ **w**)
3. ( $\neg$ **tR**  $\vee$   $\neg$ **w**)
4. ( $\neg$ **tR**)
5. ( $\neg$ **tL**)
6. ( $\neg$ **w**)

Added clauses:

7. (**tL**  $\vee$  **tR**)
8. (**tL**)

# Street Crosser Agent: Summary

Applying resolution to all possible PERCEPTS and Q (only one) combinations and decisions:

- $\text{PERCEPTS} \equiv (\neg \text{tR}) \wedge (\neg \text{tL}) \rightarrow \text{WALK}$
- $\text{PERCEPTS} \equiv (\text{tR}) \wedge (\neg \text{tL}) \rightarrow \text{DON'T WALK}$
- $\text{PERCEPTS} \equiv (\neg \text{tR}) \wedge (\text{tL}) \rightarrow \text{DON'T WALK}$
- $\text{PERCEPTS} \equiv (\text{tR}) \wedge (\text{tL}) \rightarrow \text{DON'T WALK}$

allowed our agent to:

- reason and make decisions
- learn: percepts  $\rightarrow$  decision is new knowledge!

# Knowledge Base: But wait...

If I keep adding multiple new PERCEPTS to the knowledge base KB, for example:

$$\text{PERCEPTS1} \equiv (\neg \text{tR}) \wedge (\neg \text{tL})$$

$$\text{PERCEPTS2} \equiv (\text{tR}) \wedge (\text{tL})$$

I may end up with a contradiction in my KB, right?

# Knowledge-based Agents

**function** KB-AGENT(*percept*) **returns** an *action*  
**persistent:** *KB*, a knowledge base  
*t*, a counter, initially 0, indicating time

KBBEFORE

TELL(*KB*, MAKE-PERCEPT-SENTENCE(*percept*, *t*))  
*action*  $\leftarrow$  ASK(*KB*, MAKE-ACTION-QUERY(*t*))  
TELL(*KB*, MAKE-ACTION-SENTENCE(*action*, *t*))  
*t*  $\leftarrow$  *t* + 1  
**return** *action*

CURRENTKB

new *percept*

$\text{CURRENTKB} \Leftrightarrow \text{KBBEFORE} \wedge \text{percept}$

# Knowledge-based Agents

**function** KB-AGENT(*percept*) **returns** an *action*  
**persistent:** *KB*, a knowledge base  
*t*, a counter, initially 0, indicating time

KBBEFORE

TELL(*KB*, MAKE-PERCEPT-SENTENCE(*percept*, *t*))  
*action*  $\leftarrow$  ASK(*KB*, MAKE-ACTION-QUERY(*t*))  
TELL(*KB*, MAKE-ACTION-SENTENCE(*action*, *t*))  
*t*  $\leftarrow$  *t* + 1  
**return** *action*

CURRENTKB

"time stamps"

new *percept*

$\text{CURRENTKB} \Leftrightarrow \text{KBBEFORE} \wedge \text{new percept}$
